

Cigarette Lighter Installation Guide

Tools required

- Washer- provided by FrozenCPU.com
- Pencil- not provided
- Drill and 7/8 inch hole saw- not provided
- Cigarette Lighter Kit - provided by FrozenCPU.com

NOTE: FrozenCPU.com is not responsible for damage to your case during installation.

- 1) Select the location where you will mount your cigarette lighter
- 2) Using the washer provided trace the outside of the washer where you wish to mount your cigarette lighter
- 3) After the circle is drawn remove the washer.
- 4) What you should be looking at now is an outline of the cut.
- 5) Center your hole saw in the circle and cut out the 7/8inch hole.
- 6) Detach the wires from your cigarette lighter kit.
- 7) Remove the lighter portion from the kit.
- 8) Unscrew the brass colored outer casing from the socket.
- 9) Your kit should now be in four parts; the lighter, the socket, the outer casing and the wires.
- 10) Insert the socket through the mounting hole that you made in step 5
- 11) Screw the outer casing to socket. Make sure that the two pieces are fully tightened.
- 12) Attach the wires and to the cigarette lighter socket and connect the molex connector to an open connector on your power supply.
- 13) Insert the lighter into the socket. Sit back, relax, and enjoy a smoke.
